

# The Barrier Man

- makes fencing off a quick and easy operation!

**The Barrier Man is a mobile tool for quick and effective rigging and dismantling of fences. It satisfies the information display requirement for fencing off areas.**

## Use

The Barrier Man is always dressed and ready to go. He carries a 15 meter long red and white plastic chain in each "pocket", in addition to an oblique Plexiglas display pocket for wind-proof storage and use of information signs.

Wheel and handle operated, the Barrier Man can quickly and effectively be wheeled to the desired position. He is equally useful on onshore sites and shipyards as offshore.

The Barrier Man has a low center of gravity due to the cast-in concrete in the bottom of the tube.

Total weight is 40 kg, and the Barrier Man therefore keeps its balance even in heavy wind.

## Product description

Produced in aluminium EN-AW-6060/6082 and powder varnished. The Barrier Man stands 1 meter tall. Its foundation measures 450x450 mm, stabilized by rubber knobs underneath.

## Operating instructions:

The Barrier Man is wheeled in position and the sealing chains are pulled out of the pockets for fastening. Correct display sign explaining the barrier is found in the display pocket (not included), making the area fenced off in accordance with regulations. Not to be lifted by crane.
